

**DIRECTORATE GENERAL, NATIONAL SECURITY GUARD**  
**(PRESS RELEASE)**

A Composite Indoor Shooting Range (CISR) was inaugurated by Hon'ble Home Secretary, Shri Ajay Kumar Bhalla, IAS in presence of Shri M A Ganapathy, IPS, Director General, National Security Guard on 02/04/2021 at National Security Guard, Manesar.

The Composite Indoor Shooting Range is a world class, state of art indoor firing practice range. The range has 10 firing lanes which enable indoor shooting on up to 10 targets simultaneously. The facility includes electronically controlled targets such as moving, pop-up, turning and to and fro targets with additional features of self healing and auto scoring, thereby improving the reflex shooting ability and thus improving the overall firing standards of the commandos.

It is for the first time in India that a total steel containment trap (to catch the fired bullet safely) has been installed which provides a additional safety by controlling the metal fragments from spent bullets and preventing ricochet in the direction of the firer. Other key features of the range include the ventilation system which ensures minimal lead contamination of the environment and exposure of commandos to hazardous lead fumes (typically associated with indoor shooting ranges).

Other key features of the range include the sound reduction system and the facility to broadcast the events live. The facility meets the international standards of safety and health parameters.

The project has been undertaken by M/S Aimtex Technologies (Private) Limited, New Delhi an Indian Enterprise led by young entrepreneur, registered under Micro Small Medium Enterprises.

The project will enhance the proficiency of National Security Guard as a Zero-Error Force as well as highlight the indigenous capability of creating world class and state of the art facilities.
